Cybersecurity

Security Lab is a subsidiary of Vipac Engineers & Scientists – one of Australia's leading engineering testing laboratories and consultancies since 1973. It offers specialised cybersecurity and IT qualification testing services for large and small businesses. These include expert;

> **Assessments** – Independent internal or external analyses identifying vulnerabilities in networks and working with IT or management teams.
> **Testing** – Post-assessment penetration testing, verifying existing security measures are functioning as intended and can protect the business from the latest offensive strategies.

> **Remediation** – Security Lab conducts the tasks necessary to secure a network or provides the resources for businesses to implement the recommendations themselves.
> **Incident Response** – Fast identification of Indicators of Compromise (IOCs) and resolution of security breaches.

Security Lab facilitates businesses in the development phase of or have existing cybersecurity in place. Industries the company caters for include commercial, medical, education, legal, and defence.

The company comprises of **EC-Council Certified Ethical Hackers** and **Offensive Security Certified Professionals** with over 15 years' experience building & safekeeping database- or internet-driven equipment & applications. Security Lab understands that each business is unique and, as a result, have singular security requirements. Furthermore, the company's expert analysts ensure businesses remain protected as threats evolve over time.
